Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	COLLEGE HOSPITAL COSTA MESA
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106301155
Report Period:	01/01/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	11/28/2025
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	301 Victoria St. Costa Mesa, CA 92627

Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:
https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:
https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/ unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/ unknown languages category.

4872

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	4795	4872	98.4
Spanish Language	suppressed	4872	suppressed
Asian Pacific Islander Languages	suppressed	4872	suppressed
Middle Eastern Languages	suppressed	4872	suppressed
American Sign Language		4872	
Other Languages	suppressed	4872	suppressed

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser: https://data.cms.gov/provider-data/topics/hospitals/health-equity

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

• Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

• Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

• Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

• Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.

• Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:
https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

4073

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

4073

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

NA

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	1609	40.0	0	
Housing Instability	3176	22.0	0	
Transportation Problems	3288	80.7	0	
Utility Difficulties	3304	81.1	0	
Interpersonal Safety	4073	100.0	0	

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser: https://hcahpsonline.org/en/survey-instruments/

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

NA

Total number of respondents to HCAHPS Question 19

NA

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

NA

Total number of people surveyed on HCAHPS Question 19

NA

Response rate, or the percentage of people who responded to HCAHPS Question 19

NA

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American					
Hispanic or Latino					
Middle Eastern or North African					
Multiracial and/or Multiethnic (two or more races)					
Native Hawaiian or Pacific Islander					
White					

Age	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Age < 18					
Age 18 to 34					
Age 35 to 49					
Age 50 to 64					
Age 65 Years and Older					

Sex assigned at birth	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Female					
Male					
Unknown					

Payer Type	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
Medicare					
Medicaid					
Private					
Self-Pay					
Other					

Preferred Language	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
English Language

Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

NA

Total number of respondents to HCAHPS Question 17

NA

Percentage of respondents who responded "yes" to HCAHPS Question 17

NA

Total number of people surveyed on HCAHPS Question 17

NA

Response rate, or the percentage of people who responded to HCAHPS Question 17

NA

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "yes" responses	Total number of responses	Percentage of "yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser: https://qualityindicators.ahrq.gov/

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser: https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser: https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser: https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

NA

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

NA

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:
https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

185

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

1317

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

14.0

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			35 to 49	12.1	1.6
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Medicaid	13.0	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	13.3	1.1
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Sex Assigned at Birth			Male	13.7	1.1

Plan to address disparities identified in the data

College Hospital Costa Mesaâ??s Equity Report identified four key disparities related to 30-day hospital-wide all-cause unplanned readmissions, including higher rates among patients aged 50â??64, those with private insurance, White patients, and female patients. To address these disparities, we will continue to implement individualized treatment plans that have been shown to benefit our patient population and enhance discharge planning tailored to each patientâ??s needs. This includes evaluating legal holds when applicable and ensuring patients receive appropriate prescriptions at discharge to support medication adherence, which can reduce readmissions. Risk Management will track and report readmission data by these disparity groups to the Patient Safety and Quality Committees and other medical staff meetings to ensure group dynamic discussions and transparency. Our measurable objective for 2026 is to reduce 30-day unplanned readmissions by identifying at-risk patients, strengthening discharge support, and monitoring outcomes through stratified reporting to ensure equity-focused improvements.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

At College Hospital Costa Mesa, we screen all patients for their language preferences and provide culturally tailored care. Qualified in-house interpreters and approved contracted vendors are used for all non-English encounters. Discussions in the Patientsâ?? Rights and Patient Safety and Quality Committees regarding any concerns or requests related to cultural relevance can be brought forward in these forums, where appropriate departments collaborate to ensure that patient needs are met with respect to their language, ethnicity, and cultureâ??including areas such as food options, communication, and printed materials.

Patient safety

College Hospital Costa Mesaâ??s data in regards to trends in falls, patient injury, physical assaults, emergency medication administration, and the use of seclusion and restraint are reviewed quarterly by race and gender at the Patientsâ?? Rights Committee, Patient Safety and Quality Committee, and Psychiatry Committee meetings with leadership. As a leading preferred language, Spanish/ English signs are posted in patient shower areas, where falls were identified as occurring most frequently.

Addressing patient social drivers of health

College Hospital Costa Mesaâ??s inpatient population demonstrates a significantly higher rate of homelessness compared to all California hospitals. Specifically, the rate of patients experiencing homelessness at College Hospital Costa Mesa (582.43 per 10,000) is nearly four times higher than the statewide rate (195.36 per 10,000 in 2024), underscoring the hospitalâ??s continued focus on addressing housing instability as a key social determinant of health. Ð
Ð
The Social Services Department screens all patients for Social Determinants of Health (SDOH), including food insecurity, personal safety, housing stability, and access to utilities. Given our patient population, common concerns include houselessness/homelessness and limited access to community and mental health resources for ongoing care. To address these needs, all patients receive a list of community resources and referrals upon discharge, and follow-up appointments with a case manager are scheduled to support continuity of care and safety. Screening data are collected through the psychosocial assessment and safety plan. In 2025, a validated SDOH screening tool was developed and integrated into the electronic health record (EHR) by our EHR developers. This tool includes structured data fields mapped to standardized codes to ensure consistent tracking and reporting.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

In 2024, College Hospital Costa Mesaâ??s highest rate of serious complications occurs among patients with schizophrenia and other psychotic disorders (29.2%). This highlights an opportunity to evaluate disparities in guideline-concordant treatment for this subgroup. Equity is built into clinical decision support through individualized treatment planning. Each patient receives a comprehensive assessment by a multidisciplinary teamâ??including psychiatry, nursing, social services, and activity therapy â?? to ensure that interventions follow evidence-based guidelines while addressing co-occurring social and behavioral needs. Individualized care plans are reviewed daily and at weekly treatment team meetings to adjust medication, discuss therapeutic modalities, and coordinate discharge planning based on the patientâ??s clinical progress, preferences, and identified social determinants of health (SDOH).Ð
Ð
Readmission trends are also monitored as a key performance metric to identify variations in outcomes by subgroup. College Hospital Costa Mesaâ??s 30-day all-cause unplanned readmission rate (12.9%), suggesting that factors such as homelessness, mental health instability, and limited community resources may contribute to early relapse or crisis stabilization needs. We addresses this by strengthening discharge planning, ensuring follow-up appointments with case managers, and connecting patients to appropriate community resources. These performance metrics when stratified by diagnosis, demographics, and SDOHâ??inform ongoing quality improvement and equity-focused interventions.

Care coordination

In 2024, College Hospital Costa Mesa works to ensure smooth transitions from hospital to home by focusing on each patientâ??s individual needsâ??both clinical and social. Because our inpatient population experiences homelessness at nearly three times the statewide rate (385.47 vs. 134.50 per 10,000), discharge planning goes beyond medical follow-up to include safety and resource support. Every patient is screened for Social Determinants of Health (SDOH), such as housing stability, food insecurity, personal safety, and utilities, etc. using a validated screening tool built into our electronic health record (EHR). This helps staff identify barriers early and coordinate care before discharge.Ð

Ð

Our patients are assigned their own social worker to help connect patients with housing programs, community mental health services, and follow-up appointments. They also assist with transportation and resource referrals to support stability and reduce the risk of readmission. Patients who are on Medi-Cal are connected with Veyo for transportation needs, bus passes are provided for those unable to provide own transportation modes, Uber Health has also been of assistance to transport patients to home. With Spanish being a lead preferred foreign language, we utilize in-house qualified interpreters and/or interpretive services from qualified contracted services. Ð

Ð

Data show that some groups, particularly patients with schizophrenia and other psychotic disorders (29.2% vs. statewide 17.0%) and higher 30-day readmission rates (12.9% vs. 6.4% statewide). These findings highlight the need for ongoing support after discharge. To close these gaps, we continue to strengthen individualized treatment plan and discharge planning and track follow-up completion by diagnosis, demographics, and SDOH to guide improvement efforts.

Access to care

In 2024, some of the main barriers our patients face include transportation and housing challenges. Our social services work hard to help patients find placement options when possible, especially for those who qualify and want that type of support. While some patients choose not to pursue housing programs or outside placement, staff always make sure those resources are offered and available. These efforts are to reduce readmissions.Ð

Ð

There are also some limitations with aftercare appointment scheduling, especially on weekends when certain community programs arenâ??t open. In those cases, we either set up appointments for the next available weekday or encourage patients to stay until the appointments can be arranged, so their care continues smoothly after discharge. To improve access, weâ??ve strengthened our relationships with community partners and added more liaison support to help patients connect with needed services. Staff from different departments often work together to navigate barriers and make sure each patient has the best possible plan and placement before leaving the hospital.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)

Y
